

Blastequip Mechanical Recovery Blast Rooms

- Mechanical recovery systems provide bulk abrasive handling in the shortest time.
- Suited for rooms where the blasted product is large or must be moved prior to room clean up.
- The versatile design of the system allows for many configurations and most common abrasive types.
- Can be provided with a pit, a single screw conveyor or multiple screw conveyors feeding the bucket elevator.
- Clean air washed abrasive is automatically returned to the blast pot/s for reuse.
- Room designs can incorporate rails and trolley, overhead conveyors and doors at both ends.
- One or multiple operators.
- Clean clear visibility for the operator within the blast room.
- Systems can incorporate scalping drums for removal of course product from the abrasive.

What ever the Blast Room Application – we have a solution
