

Blastequip Pneumatic Recovery Blast Rooms

- Pneumatic recovery provides abrasive recovery and dust collection in the same air movement.
- The fan driven system collects the abrasive through floor modules set in a shallow trench in the floor or set above the floor. Best suited for providing the maximum area of recovery at a reasonable cost.
- The versatile design of the system allows for many configurations and most common abrasive types.
- No moving parts in the abrasive recovery system
- Clean air washed abrasive is automatically returned to the blast pot for reuse.
- Room designs can incorporate rails and trolley, overhead conveyors and doors at both ends.
- One or multiple operators.
- Clean clear visibility for the operator within the blast room.

What ever the Blast Room Application – we have a solution
